

DUNELAND LANDSCAPE LLC

Tree & Shrub Care

Give your trees & shrubs everything they need to thrive

Protect and enhance the value of your landscaping investment with our complete tree & shrub care services. We keep your plants healthy in two ways:

- Fertilization – Our specially formulated fertilization treatments deliver the essential nutrients your trees and shrubs need to stay vibrant and vigorous. Proper nutrition applied in April/May and September/October helps your plants resist stress, promotes new root, leaf and flower development and more
- Insect & Disease Control – Pests, fungus and disease can destroy or discolor foliage, stunt growth and even lead to the early death of your trees and shrubs. Proactive treatments applied May through September can protect your plants from these hazards, preserving the beauty of your landscaping

Seasonal fertilization keeps trees & shrubs healthy and vibrant

Proactive disease & pest control prevents damage before it starts
